Place your iPhone here

Front Camera

Take the following steps if the app does not recognize the paper:

1. Pick up the phone and place it again where marked and take off your iPhone's case
2. Always clean your front camera, because oil from your finger tips cause very bad performance.
3. Sit as close as possiblle to the paper to cover the background lights with your body
4. Put coins on the paper where marked or flatten the paper somehow
5. Press the keys. If any part of a key or its enviroment shifts, fold the paper
along the white line as shown in the troubleshooter (in the app)!
6. Print another keyboard. Use 100% scale or 'actual / original' size setting. **Don't use fit or scale option!**
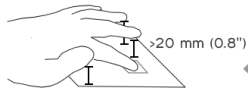

If you have still problems, turn on your Camera app, make a photo while the phone is on the
marked place and send it to us!

You can place a book or something here to steady the paper.
Do not cross this line, because the camera won't see the keys.

Calibration sign

Put a coin in these signs,
if you have problems
with flattening the paper.

Do not cross this line with your fingers, even in the air!

>20 mm (0.8")

Press a key with this part of your finger: ❯
❮ Keep ALL your other fingers always in the air at least 20 mm (0,8") high
